Summary

Full-Stack Developer with 1+ year of hands-on experience building and maintaining web applications using React, TypeScript, Node.js, C#/.NET, MongoDB, and SQL. Experienced in developing responsive user interfaces, REST APIs, backend services, database integrations, and third-party API integrations. Familiar with Docker, GitHub Actions, CI/CD, AWS, Azure, and Terraform for containerization and application deployment.

Experience

Full Stack Learning

Onsite

Full Stack Developer

June 2025 - Present

- Contributed to multiple production full-stack applications, including 4X [Digital.AI](#), an advertising analytics platform serving 10+ clients, and **VideoWorkers**, a video-based recruitment platform.
- Worked on **4X Digital.AI**, an advertising management and analytics platform serving 10+ clients across Google Ads and Meta Ads campaigns.
- Developed, implemented, integrated, built, designed, maintained, containerized, deployed, troubleshoot, optimized.
- Developed and integrated **REST APIs using C#/.NET and Node.js** for business logic, authentication, profile management, and third-party integrations.
- Contributed to **VideoWorkers**, a video-based recruitment platform with candidate/employer profiles, authentication, job search, recruitment workflows, and video CV functionality.
- Worked with **SQL and MongoDB** for application data storage, querying, and backend integrations.
- Containerized applications using **Docker/Docker Compose** and worked with **GitHub Actions CI/CD** for automated builds and deployments.
- Supported application deployment and configuration on **Azure/AWS**, including environment variables, secrets, logging, and production troubleshooting.

Ubuy India

March 2025 - May 2025

Frontend Developer Intern

- Developed 10+ responsive product pages for Ubuy India's e-commerce platform using HTML, JavaScript, and React.
- Built reusable React components (product cards, filters, search results) reducing repetitive UI code across the platform.
- Collaborated with a 4-member team using Git and Agile/Scrum, participating in sprint planning and code reviews.

Projects

Full Stack Learning Platform

2025-2026

- Developed a full-stack learning platform using **React, TypeScript, Node.js, and MongoDB**, with separate student and admin modules.
- Built responsive interfaces for learning content, quizzes, user activities, and administrative functionality.
- Developed **10+ REST APIs** for user management, quizzes, and content delivery.
- Integrated the **Trello API** to dynamically deliver daily updates and learning content.
- Designed and managed MongoDB collections for application and user data.
- Containerized the application using **Docker** and configured automated deployment using **GitHub Actions**.

VideoWorkers — Video Recruitment Platform

2026-present

- Developed a **full-stack video-based recruitment platform** connecting candidates and employers through video profiles, job search, and recruitment workflows.
- Built responsive frontend features for **candidate profiles, employer dashboards, job listings**, and multi-step registration flows using **React** and **TypeScript**.
- Developed backend APIs for **authentication, profile management, candidate search, and job offer workflows**.
- Implemented **JWT-based authentication and role-based access control** for candidates, employers, and administrators.
- Implemented secure video CV uploads using **Azure Blob Storage** concepts and secure upload mechanisms for large media files.
- Added candidate filtering and search functionality based on parameters such as **job role, location, and experience**.

4X Digital.AI

2025-2026

- Contributed to the development of **4X Digital.AI**, a full-stack platform for managing and analyzing Google Ads and Meta Ads campaigns, serving **10+ clients** and handling **5+ ad accounts**.
- Developed responsive dashboards and **8+ reusable UI components** using **React** and **TypeScript** for displaying campaign and performance data.
- Developed and integrated **15+ REST APIs using C#/.NET** for business logic, campaign management, and third-party integrations.
- Built automated Python data pipelines to fetch and process Google Ads data, reducing manual reporting time by **~70%**.
- Worked with **SQL** for storing, querying, and analyzing advertising and campaign data.
- Containerized application services using **Docker** and supported deployment through **GitHub Actions and Azure**.
- Used application logs and **Azure Monitor** to troubleshoot production issues and improve application reliability.
